Notes: This report is created from data gathered at the point of collection. Liquid materials are listed as gallons. Solid items are listed as pounds, feet or each. Using standard guidelines, items collected by length, item count, and liquid gallons have been converted into a measurement of pounds. For example, 8.5 lbs. per one gallon of used oil. Weights of solids are taken from the containers. For example, a 10 lb. bag of fertilizer that is half-full would be estimated to be 5 lbs. Paint and other liquids are periodically weighed and the average weight is adjusted in the system. Electronic items are periodically weighed. The average weights used are subject to revision. Weights are not related to nor do they include the weight of outbound shipping containers. The difference between total pounds shipped for recycling and total pounds collected are materials that are not recycled. These materials may be incinerated, neutralized or sent to a landfill. Some acceptable recycling processes can generate residue that is or cannot be recycled for example, contaminants such as trash packed into paint cans.
